PROJECT WORK

- **Title: Real-time temperature monitoring system**

- This project aims to monitor the temperature of a particular person by detecting his/her face and converting it into thermal image. First, the image is converted to gray-scale and intensities are mapped and converted to thermal image.

- **Title: Twitter Sentiment Analysis**

- The main objective of the proposed system is to analyze the sentiments behind a particular tweet. In the first part, it is tweet level sentiment analysis that uses API call to retrieve recent tweets of a person and classify the tweets as positive, negative or neutral using polarity. There is a second part which is phrase level sentiment analysis which tells about the polarity of single sentences.

- **Title: Anti-sleep Alarm for Drivers**

- This was a sensor-based project made for helping drivers during their night shifts. This project aims towards waking up a sleepy driver using buzzers. It uses an eyelid sensor for detecting a closed eye and starts the alarm after few seconds so as to wake the

driver up. It helps in avoiding accidents happening due to sleeping drivers.

- **Title: Alumni Management System**

- As the problem statement says this project is made for college use purposes. The alumni's and their experiences in college are listed on the website. Other features like last year placements, recruiters and other information is listed on the site.
